THE WINE GUARDIAN: CHILLIN' IN STYLE

Let's take a hard look at this storage thing. If you are storing your wines in a closet and you've reached a point in it where you have a ratio of 50 times more bottles than dresses then it might be time to begin considering the addition of a "real" wine cellar. Perhaps it's time we introduced you to The Wine Guardian. We're referring of course to a state of the art through-the-wall wine cellar system produced by Air Innovations.

If you can choose a closet with at least one outside wall, it will make installation of a

temperature

unit simple because the warm air exhaust can simply be directed outside. Once you replace those stacks of cardboard cases with actual bottle racks, the Wine Guardian can be mounted flush with either the racks or the wall with a one-piece wall bracket and support frame. What you've now got is a system engineered to accommodate small- to mid-sized residential wine cellars, even restaurant and hotel wine storage as well as wine retail locations. The Wine Guardian Through-the-Wall system includes an electronic thermostat and humidistat to monitor cellar temperature and humidity. To add to its cool factor design appeal, the system features streamlined airflow louvers and a black and stainless steel faceplate incorporating the digital display.

That's all well and good but are you ready for the EuroCave? The creator of one of the world's finest wine cellars, now presents to us the pinnacle of wine preservation! This bad bod chills and preserves opened wine up to 10 days *or, so they say!* You simply place an uncorked bottle inside, close the door, slide EuroCave's patented vacuum cylinder over the bottle neck, and set the desired temperature. No stoppers, pumps, or gases required. *The EuroCave SoWine Home Wine Bar* is all you need!
