Wine Guardian® Wine Cooling System Designed for High-End Cellars

Commercial Grade Equipment for Homes, Restaurants and Institutional Wine Storage

Syracuse, NY (February 23, 2009)- Wine Guardian® wine cellar cooling systems are commercial grade climate control systems designed specifically for high-end residential wine cellars, institutional wine rooms, restaurants and commercial storage facilities. Wine Guardian equipment, which can be ordered in four capacities to condition fine wine collections from 20,000 bottles to fewer than 500 bottles, maintains optimal temperature and humidity to keep the wine at the correct aging temperature, said Michael A. Militi, Wine Guardian division manager. "They are the only self-contained and ductable wine cellar cooling systems available; this feature means you can easily install a Wine Guardian anywhere you have space and you will not see nor hear the refrigeration componentry in your wine cellar."

Wine Guardian offers many standard features and options unique to the Wine Guardian brand and not available from other manufacturers, Militi added. "For instance, Wine Guardian thermostatically controls cooling up to 25 feet away from your cellar, which gives you versatility when planning your wine cellar design and installation." Wine Guardian systems also are made of corrosion-resistant, powder-coated aluminum for durability and are safety certified to Underwriters Laboratories' specifications by the Environmental Testing Laboratory and Canadian Standards Association.

According to Militi, Wine Guardian options include: in-line or integrated humidifiers for exceptionally dry locations; electric heating and low ambient protection for cold climates or covered outdoor applications; and, high ambient protection for hot regions and attic or crawl spaces.

Wine Guardian News Release
Designed For High-End Wine Cellars...

Wine Guardian products are distributed internationally, and "our representatives can help you determine which size unit and what kind of options are best suited for your wine cellar design and storage needs. This will ensure optimal temperature and humidity control and the preservation and enjoyment of your valuable wine investments for many years."

Wine Guardian is a registered trademark of Air Innovations®, which designs and manufactures Wine Guardian wine cooling systems at its headquarters in Syracuse, New York. Air Innovations, established in 1986, builds specialty air conditioning, refrigeration and environmental control products that also are used in the defense, aerospace, healthcare, semiconductor and retail industries.
